

Vansh Jaiswal

Backend Developer (Node.js)

jaiswalvansh96@gmail.com • +91 7249782852 • Nagpur, Maharashtra • github.com/Vanshgg33

PROFESSIONAL SUMMARY

Backend Developer specializing in Node.js, RESTful APIs, and scalable backend systems. Hands-on experience building SaaS applications with a strong focus on JWT/OAuth authentication, microservices architecture, and secure API design. Skilled in Node.js, NestJS, MongoDB, MySQL, and Docker-based deployments.

TECHNICAL SKILLS

Backend: Node.js, NestJS, REST APIs, JWT, OAuth, Microservices

Databases: MySQL, MongoDB, SQL

Frontend: Angular, HTML, CSS

Tools: Docker, Git, IntelliJ IDEA, Eclipse

Languages: JavaScript, TypeScript, Java

EXPERIENCE

Backend Developer (Node.js) — Arobuz Growth Agency • Current

- Architected and shipped backend services in Node.js and NestJS for SaaS products, exposing 10+ RESTful APIs across authentication, user management, and core business workflows.
- Designed and implemented a data scraping pipeline that aggregates social media signals (profiles, posts, trends) from multiple sources, normalizing them into a unified schema for downstream analysis.
- Built a Twitter-focused trend analysis service that processes scraped data to surface emerging topics, hashtags, and engagement patterns through queryable APIs.
- Developed a profile and trend management system with CRUD APIs, tagging, and historical tracking, backed by MongoDB for flexible schemas and MySQL for relational entities.
- Built a CRM backend for managing users, leads, and interaction history, including pipeline-stage APIs and activity timelines consumed by internal dashboards.
- Integrated AI-driven analysis (LLM APIs) on collected data to generate trend summaries, content insights, and lead-qualification signals, with caching to control cost and latency.
- Implemented role-based access control (RBAC) and JWT/OAuth authentication across services, enforcing fine-grained permissions for admins, analysts, and CRM users.
- Containerized services with Docker and contributed to a microservices architecture for independent deployment of scraping, analysis, CRM, and auth modules.

Full Stack Developer Intern — Resonit • Previous

- Developed and integrated REST APIs for authentication and user workflows.
- Implemented JWT-based authentication systems, enhancing application security.
- Contributed to backend feature development and API integration.

PROJECTS

WhatsApp Commerce Backend System (NestJS) &

- Backend-driven WhatsApp commerce platform for orders, inventory, and customer interactions.
- Implemented role-based access control (RBAC) for packer, biller, and delivery roles.
- Built inventory management APIs with real-time stock tracking and Meta Catalog sync.
- Integrated WhatsApp Business workflows for order confirmation and instant billing.

Restaurant Management & Ordering System

- Backend APIs for order processing, menu management, and admin operations.
- KOT (Kitchen Order Ticket) system for streamlined kitchen workflows.
- Live: rangeeladhaba.in

Card Management System

- Secure backend with Spring Boot, REST APIs, and MySQL integration.

Medical Diagnostic Center Application

- Spring Boot backend with secure API endpoints for patient data management.

EDUCATION

Bachelor of Computer Applications (BCA) — Manipal University Jaipur • Expected 2026
