

Vansh Jaiswal

Backend Developer (Node.js)

jaiswalvansh96@gmail.com • +91 7249782852 • Nagpur, Maharashtra • github.com/Vanshgg33

PROFESSIONAL SUMMARY

Backend Developer with experience designing scalable microservices using Node.js and NestJS, specializing in REST API development, authentication systems (JWT/OAuth), and high-performance backend architectures. Experienced in Dockerized deployments, data pipelines, and AI-integrated systems.

TECHNICAL SKILLS

Backend: Node.js, NestJS, REST APIs, JWT, OAuth, Microservices

Databases: MySQL, MongoDB, SQL

Frontend: Angular, HTML, CSS

Tools: Docker, Git, IntelliJ IDEA, Eclipse

Languages: JavaScript, TypeScript, Java

EXPERIENCE

Backend Developer (Node.js) — Arobuz Growth Agency • Current

- Designed and developed an end-to-end CRM backend system managing users, leads, pipelines, and interaction history, with scalable REST APIs and RBAC; integrated AI-powered proposal generation using Gemini APIs and a rich text editor for dynamic content creation.
- Built a high-performance web scraping engine capable of extracting data from multiple platforms, including social media sources, using API integrations and structured data pipelines.
- Engineered a social media data aggregation system that collects and normalizes profiles, posts, and engagement signals into a unified schema for analytics.
- Developed a Twitter trend analysis engine to identify emerging topics, hashtags, and engagement patterns through optimized APIs.
- Architected and shipped backend services in Node.js and NestJS for SaaS products, exposing 10+ RESTful APIs across authentication, user management, and core workflows.
- Implemented role-based access control (RBAC) and JWT/OAuth authentication across services.
- Containerized services using Docker within a microservices architecture.

Full Stack Developer Intern — Resonit • Previous

- Developed and integrated REST APIs for authentication and user workflows.
- Implemented JWT-based authentication systems, enhancing application security.
- Contributed to backend feature development and API integration.

PROJECTS

WhatsApp Commerce Backend System (NestJS)

- Designed a WhatsApp-first commerce platform enabling users to browse products, place orders, and receive confirmations entirely through WhatsApp Business workflows.
- Built conversational order flows (catalog browsing, cart creation, order placement, and status updates) integrated with WhatsApp Business APIs.
- Developed backend services for order processing, inventory management, and customer interactions with real-time stock tracking and Meta Catalog sync.
- Implemented RBAC for packer, biller, and delivery roles, supporting end-to-end fulfillment operations.
- Created event-driven APIs for order lifecycle management (creation, confirmation, billing, dispatch) with webhook integrations for real-time notifications.

Restaurant Management & Ordering System

- Backend APIs for order processing, menu management, and admin operations.
- KOT (Kitchen Order Ticket) system for kitchen workflows.

Card Management System

- Secure backend with Spring Boot, REST APIs, and MySQL integration.

Unified Admin Dashboard (Commerce & CRM)

- Developed a unified frontend dashboard for managing orders, inventory, and customer interactions across the platform.
- Built real-time order monitoring and stock management interfaces for operational efficiency.
- Implemented a chat system to communicate with users, view conversation history, and access previous orders within a single interface.
- Integrated backend APIs to provide a centralized view of customer data, order history, and engagement insights.

EDUCATION

Bachelor of Computer Applications (BCA) — Manipal University Jaipur • Expected 2026
